

Mosaic Australia

Understand your consumers at a household level and reach them at scale

Consumers are creating large amounts of data every day, and you're capturing it at every moment through your brand, product and service touch points. While this information can be leveraged and used to your advantage, often it doesn't provide you with some of the most important insights you need – going beyond the customer journey to actually understand the customer.

Mosaic defines, measures, describes and engages audiences through accurate segmentation, enabling you to have more strategic and sophisticated conversations with your consumers.

Mosaic classifies every household in Australia into one of 51 Mosaic Types or 14 overarching Mosaic groups based on who they are, where they live, what they do and what they like.

Mosaic enables you to:

- Make smart customer investment decisions
- Deliver significant return on marketing spend
- Build loyal, long-term relationships with your most valuable customers
- Maintain consistent consumer experiences across all touch-points

Mosaic empowers you with 360 Degree customer understanding, beyond standard customer data points that are collected through day-to-day operations

Mosaic: Third Party Data

- Why they matter
- Who they are
- Where they live
- What they do
- How to reach them
- How to speak to them

Company data: First Party Data

- Name
- Email
- Phone
- Address
- Products Purchased
- Amount spent

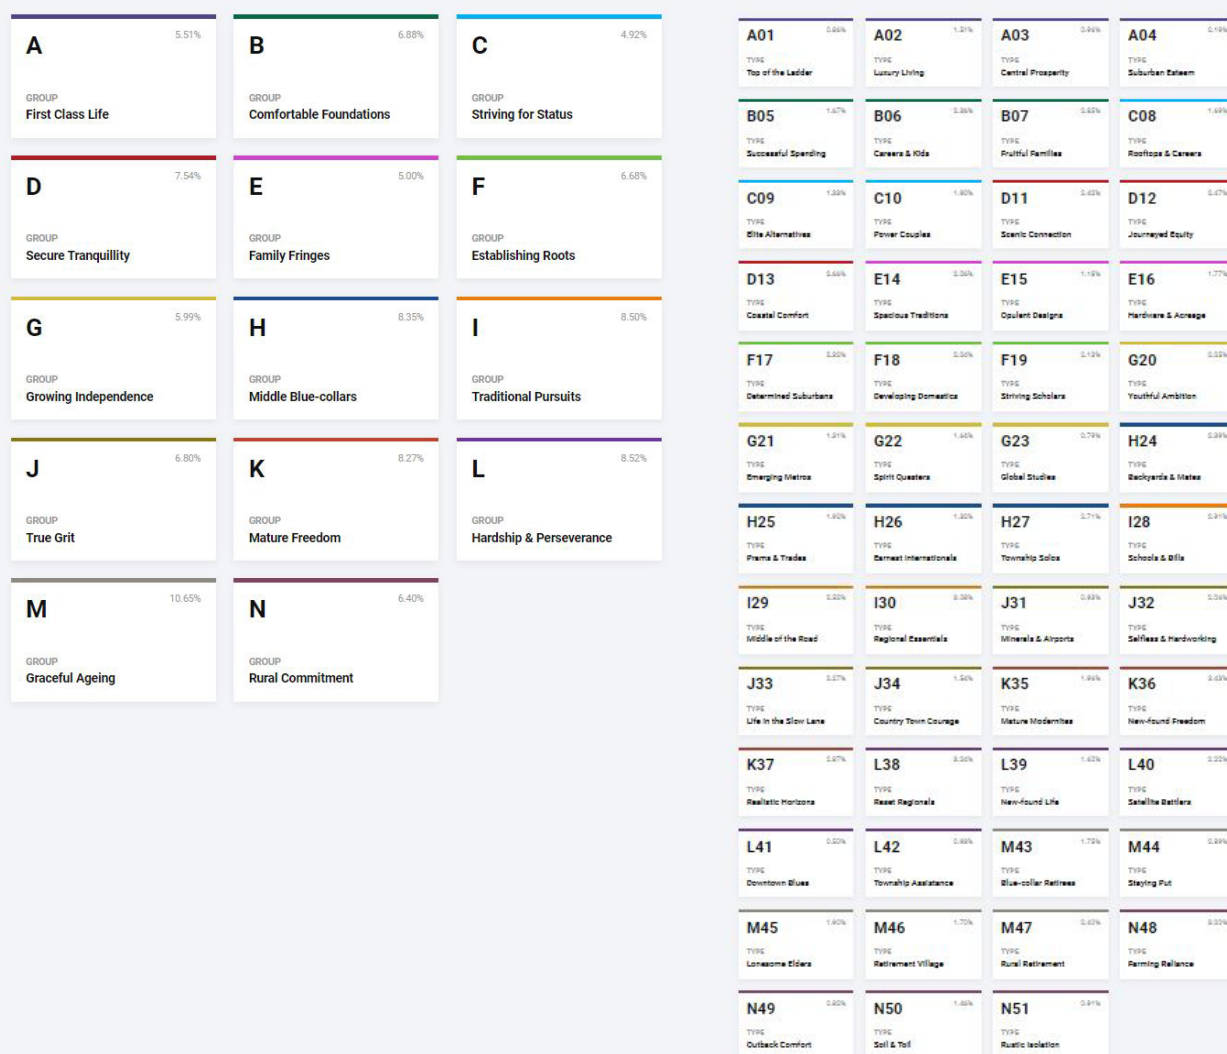

What is Segmentation?

Segmentation is a way of dividing a population into groups defined by a specific set of characteristics. These characteristics could be as straight forward as customer value, or it could be something more complex such as your customers' needs or values. By grouping your customers into smaller similar groups, you have greater flexibility to achieve your specific business objectives by treating each segment in the most engaging and relevant way.

Experian's Mosaic segmentation

Mosaic Australia divides Australian households into 14 Groups and 51 detailed Types. It uses 100 data variables to create the Groups and Types plus a further 1,700 variables to describe them based on their demographic characteristics, geographic location, lifestyle, behaviour, and attitudes.

Experian's Mosaic segmentation is unique as it provides a complete view of Australian households using Experian's proprietary household level datasets, household property information, ABS data, plus significant research data to capture not only what households say they do but what they actually do.

How do you use Mosaic?

Assign one of the 14 Mosaic Groups and 51 Mosaic Types to each customer record.

A company will typically have an initial customer database which includes variables such as name, email, address, mobile, products bought, amount spent etc. A Mosaic code can then be appended to every record in a customer database, and this can be done in two main ways:

1. A Mosaic Group and Type has been applied to every household in Australia, therefore we can append a Mosaic Group or Type to every customer record based on their physical address.
2. If there is missing address information in the customer database or it is incomplete we can take a combination of other fields of information that is available (such as name and email, or email and mobile) and link it to Experian's proprietary database of 10 million+ households; ConsumerView, which all have a Mosaic Group or Type applied.

Initial Customer Database

Segment

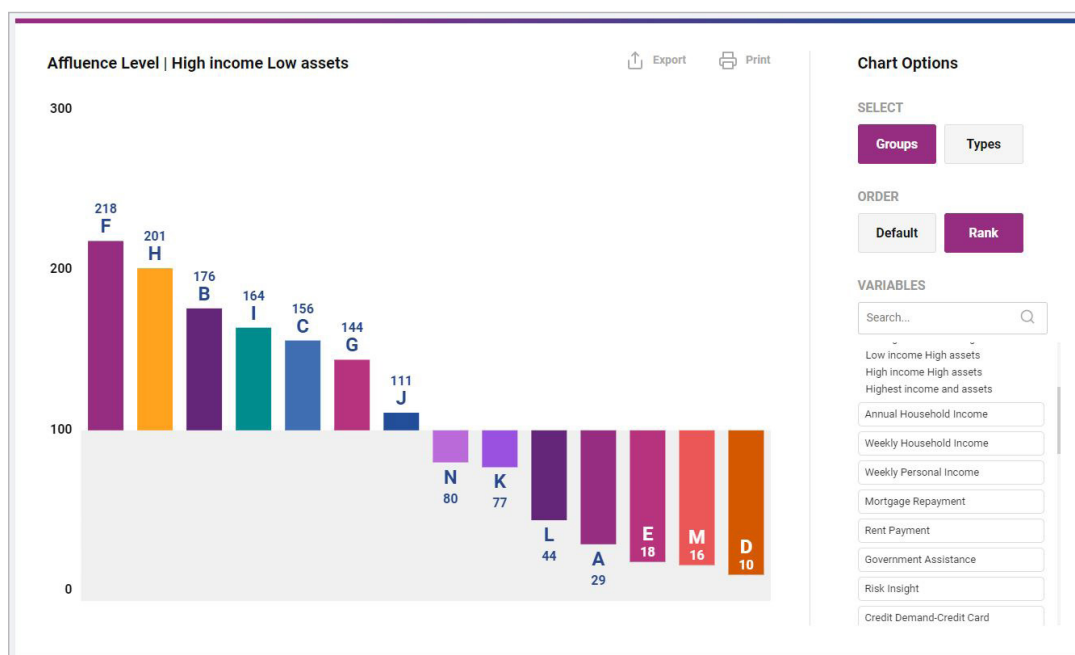

Target

1. Prioritise

Prioritise which Mosaic Groups or Types to target:

- Analyse your customer database and determine which Mosaic Groups and Types make up your core customer base.
- Segment your customers using the information you hold about them and define your 'best customers'.
- Which Mosaic Groups and Types are your most loyal or profitable?
- Which Mosaic Groups and Types are high churn or low margin?
- Which Mosaic Groups and Types are underrepresented in your customer database but are in the market for your product or service?

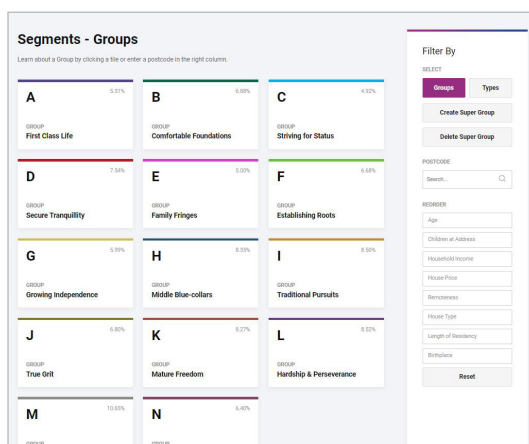

2. Personalise

Analyse and understand your key Mosaic Groups and Types using over 1,700 data points available in the Mosaic Website. There are three main sections to the Mosaic Website: Segment, Compare and Identify.

Segments:

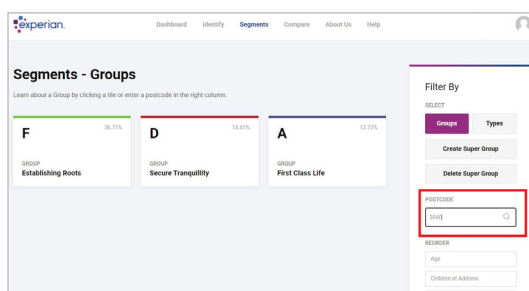

Gain insight into the Mosaic Groups and Types using a mix of visual, descriptive and statistical information.

The Mosaic Groups and Types are ordered from A-N. You can rank and reorder Mosaic Groups and Types based on other key characteristics, such as average age, children at address, house price, etc.

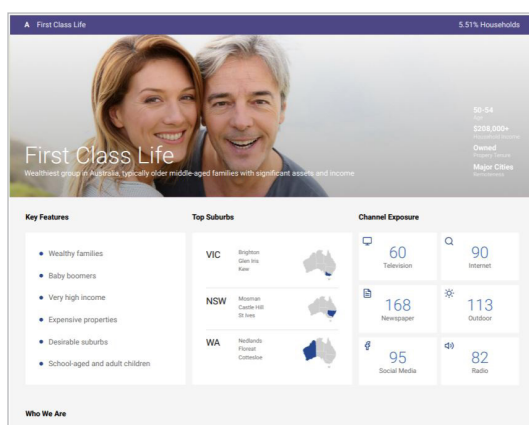

Type in a postcode to find out which Mosaic Groups or Types live there.

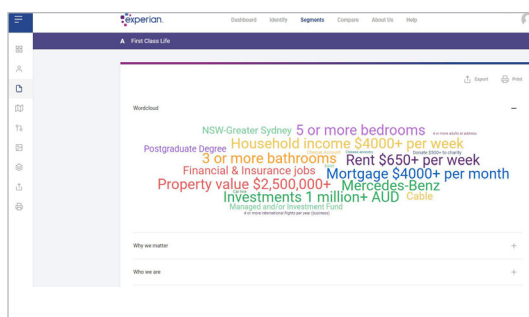

To Understand a specific Mosaic Group or Type, click on the segment for more information.

The first page you will see is a visual summary of the key features of that Mosaic Group or Type.

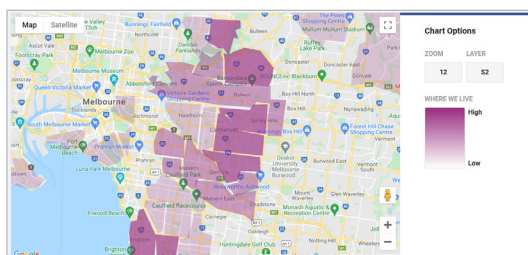

The next tab describes the Mosaic Group or Type in detail in relation to 'Why we matter', 'Who we are', 'Where we live', 'What we do', 'How to reach us', 'How to speak to us'.

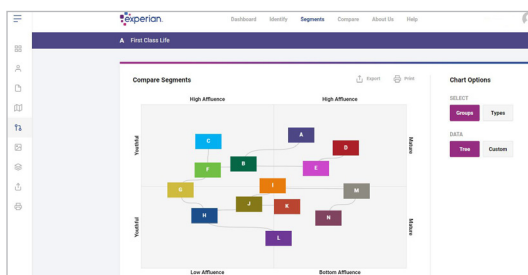

Map where the Mosaic Group or Type is located down to SA2 geographic level.

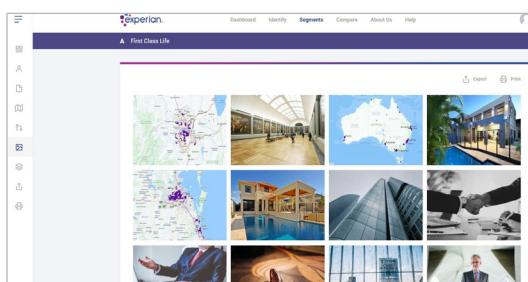

To see a more detailed geographic level **Location Analyst** can be utilised.

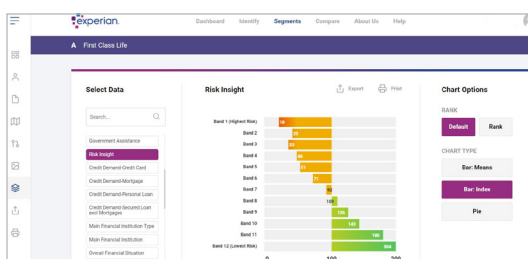

Understand how the Mosaic Groups and Types relate and differ to one another based on key variables in the family tree graphic.

Utilise the stock photos available for each Mosaic Group and Type to get a visual representation.

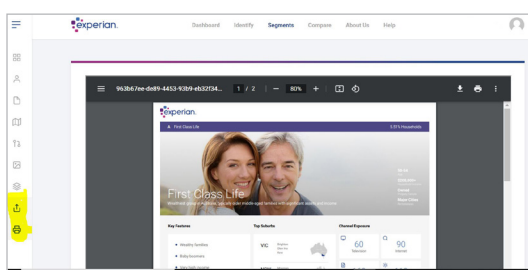

Select from over 1,700 data variables and rank against each Mosaic Group and Type to get a granular understanding of who they are, how they get by, where they live, their finances, how they communicate, what they do, what media they consume, telecommunication usage, online activity and their opinions.

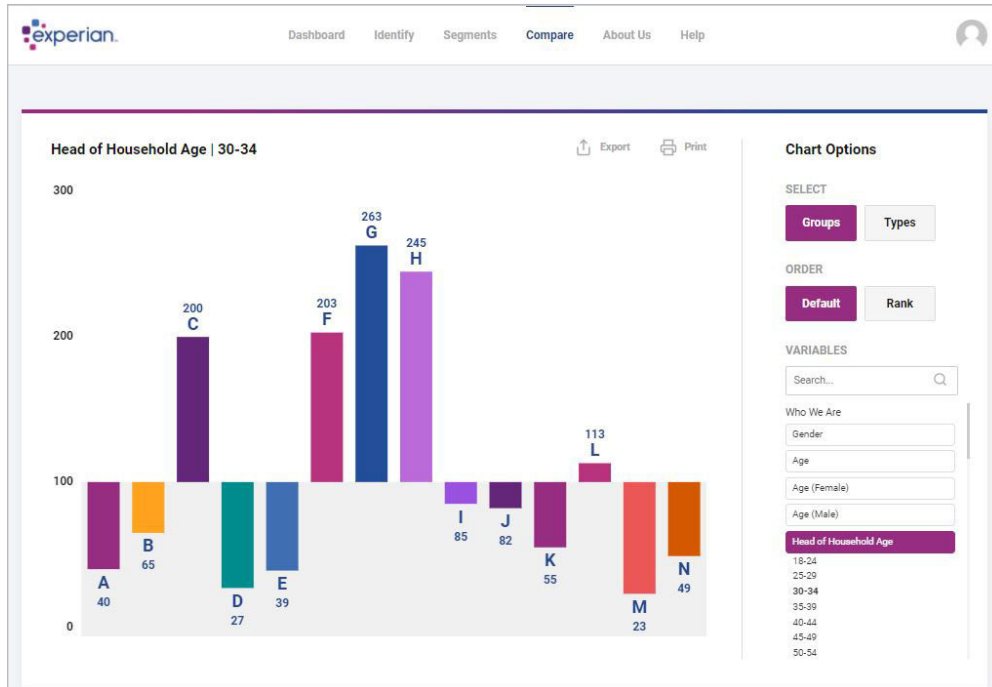

Use the Export and print function to download the detailed view and description for each mosaic group, mosaic type or super group as a PDF.

The content is then in a form that can be readily shared within your organisation.

Compare:

Choose particular variables and compare and rank the Mosaic Groups and Types which align; most to the least with your selection.

Discover:

Build up a picture of your ideal customers and identify which Mosaic Groups or Types you should use to target them.

Select variables which reflect your target market.

The screenshot shows the 'New Audience Search' interface on the Experian Identity dashboard. On the right, the 'Selection Summary' box is highlighted with a red rectangle. It contains two selected criteria: 'Affluence Level: High Income Low assets' and 'Financial Products: Investments, Real Estate (incl. own home)'. Below these, there are radio buttons for 'Groups' and 'Types', and a 'Threshold' slider set to 10. At the bottom of the 'Selection Summary' box, the 'Run Report' button is highlighted with a red rectangle.

Once your selection appears in the 'selection summary' box to the right, click 'Run Report' to generate the results. This will show you which Mosaic Groups or Types are the most similar to your definition and allow you to target them.

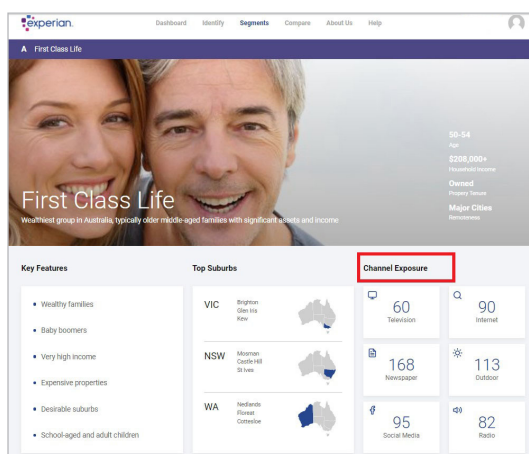

The screenshot shows the 'Search Results' interface on the Experian Identity dashboard. The 'Search Criteria' box on the right is highlighted with a red rectangle, showing the same criteria as the previous screenshot. Below this, the 'Search Results' section displays a bar chart with six categories: B (Comfortable Foundation), C (Stretching for Status), F (Establishing Roots), G (Growing Independence), H (Middle class comfort), and I (Traditional Privilege). The 'Run Report' button is also highlighted with a red rectangle.

3. Media Planning

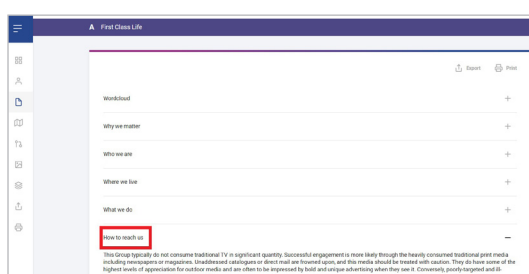

Reaching your audience on the media channels they are actually using is crucial.

You can use Mosaic to select the most relevant media channels in a number of different ways.

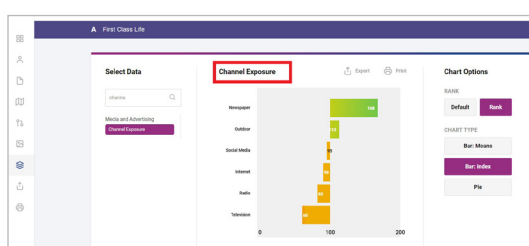

1. The simplest way is to use the “Channel Exposure” index on the dashboard of each of the Groups and Types. This provides a likelihood (index) that the selected segment is exposed to each of the six shown mediums.

2. On the descriptions tab, there is a section called “How to reach us”. This contains simple to understand summary insights of the media behaviours of the selected segment.

3. The third method is using the final tab within the Mosaic website. This will provide the greatest level of detail available. There are a range of deeper insights into media behaviours available here. These can be searched using the search bar at the top left.

By better understanding what types of media your target market engages with, through the Mosaic website, you are better able to align campaigns and marketing activity to the optimal platform.

4. Media Execution

You can use Mosaic to help inform your media buying decisions. This allows for more efficient execution no matter the platform.

There are many ways you can target your Mosaic Groups and Types without having to convert them into basic demographics, ensuring nothing is lost in translation. Utilising Experian's ConsumerView and Media Channel network for consistent cross-channel targeting you can extend your reach across our Digital network.

Digital Channels

Find users that match Mosaic Groups and Types across the channels they already frequent

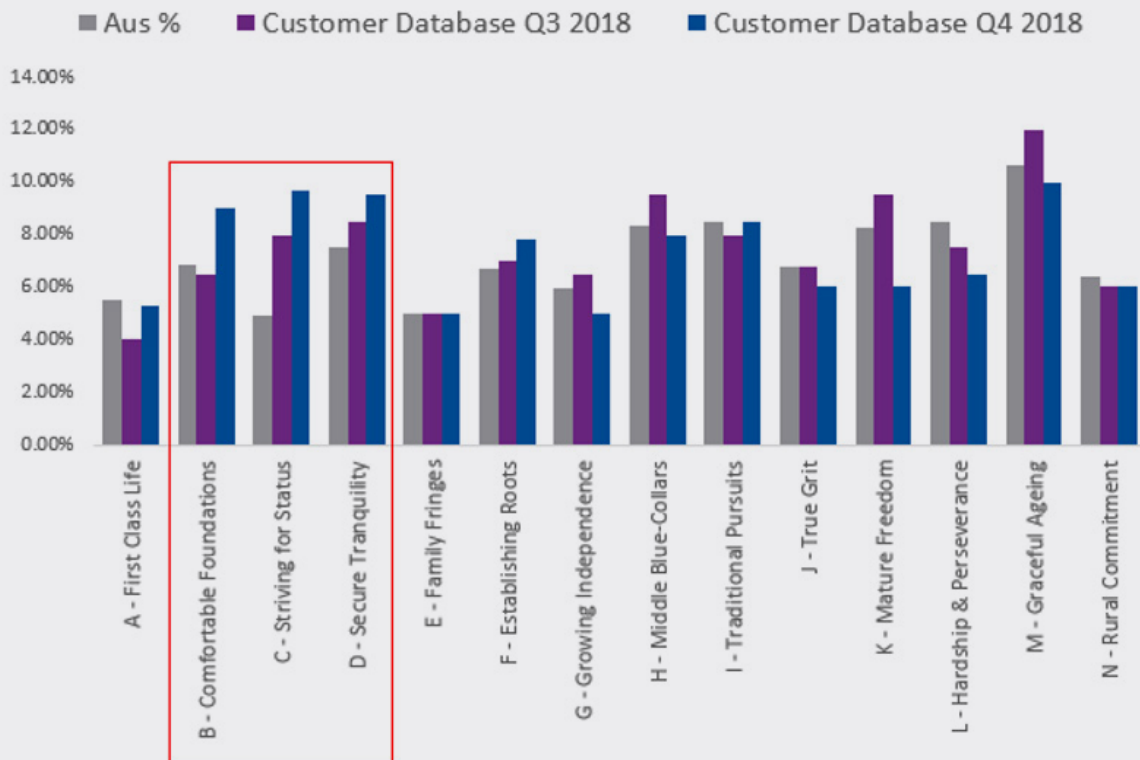

Media Planning Tools

Survey respondents are appended with Mosaic in order to cross-tab Mosaic Groups and Types by media consumption down to outlet or branded level.

5. Measurement

Mosaic allows you to start to review and measure how well your campaigns, products or services have resonated or reached your audience by continuously tagging up new customers and identifying which Mosaic Groups and Types you are growing. For example, below, a campaign targeting Groups B, C and D can see an increased proportion of these Groups now represented within their customer set.

How do we build Mosaic?

Experience

Experian has built more than 50 Mosaic segmentation solutions worldwide over the past 30 years. Mosaic Australia addresses the changing dynamics of Australian households, helping marketers key into new consumer dynamics so that they can understand the behaviour, attitudes, and preferences of their best customers and reach them in the most effective channels with the best offers.

Mosaic Build

To build Mosaic, we take the following approach: (a.) Identification of the most appropriate and stable data sources as predictive inputs, (b.) A sophisticated proprietary approach to clustering that is unique to Experian, (c.) Extensive analysis to assist in the identification, validation, and interpretation of the segments.

Clustering

Experian's clustering techniques have been developed and refined using our global experience in creating consumer classifications. The primary objective is to create a classification that accurately reflects Australian consumers today and delivers the optimal statistical performance when differentiating between consumer conditions and behaviours. The clustering techniques utilise a multi-dimensional approach to ensure that all households, and geographic characteristics that will influence consumer behaviour are considered and explained.

Qualitative Data

More than 100 data variables have been used to build Mosaic. These have been selected as inputs to the classification on the basis of their coverage, quality, consistency and sustainability. To be included for use, the data variables must enable accurate identification of, and discrimination between a wide range of consumer characteristics. They also must be updateable over time to ensure continuous accuracy when assigning Mosaic codes.

Public

Mesh Block and Postcode level

- Age
- Education
- Family Composition
- Household size
- Presence of children
- Property type
- Tenure
- Travel to work
- Work status

ConsumerView

Household level

- Land Area
- Sale/rental data
- Lifestage
- Length of Residence
- Household Compositions
- Adults at address
- Property type
- Ruralicity
- Tenure
- Credit risk and demand

Descriptive Data

Essential to understanding the behaviours of each Mosaic Group and Type is the richness of the descriptive content.

Mosaic is applied to various authoritative sources of market research, media, and digital behavioural data to build a comprehensive and extensive portrait of Australia's socio-economic make-up, life stages, lifestyle and cultural diversity.

All descriptive data is found in the Mosaic website and is able to be cross-tabbed against every Mosaic Group and Type.

This detailed, descriptive content is spread across the below 10 category headers.

The Mosaic Portfolio

Consistency is key and Mosaic's classification works as a 'common language' across all channels, underpinning your whole marketing activity.

Utilising the entire Mosaic portfolio takes the concept of a 'common language' to a whole new level enabling your key Mosaic Types to be further incorporated into other Experian solutions and partner channels.

Mosaic

Mosaic classifies the Australian population into 14 overarching Groups, segmented according to the defining characteristics they have in common.

Offering the next level of detail, the 14 Groups are then split into 51 Types, providing greater differentiation and information about households.

Mosaic Segments

Mosaic Segments are Mosaic Types broken down into further pieces based on key characteristics. Mosaic Segments allow further granularity when segmenting your audience.

Mosaic Factors

Mosaic Factors is a segmentation that identifies and brings out the themes that exist in the 100+ variables used to build Mosaic. These variables are summarised into five non-correlated 'themes' that exist in the data. These factors can be an input into a company's own custom modelling.

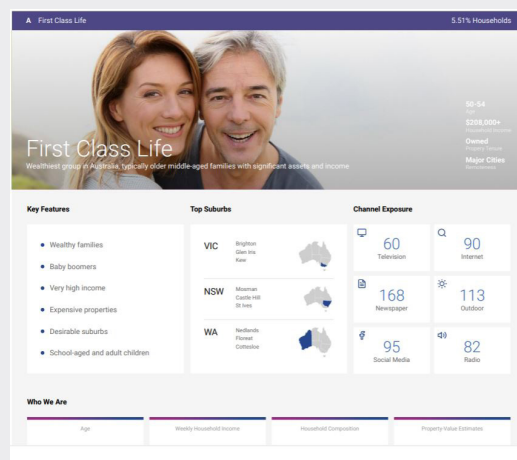

Mosaic Custom

Provides the next level for Mosaic to refine clusters based on your business's customer data and priorities.

Mosaic Global

Experian Mosaic is available in 28 countries, covering over 939 million of the world's households. While each country has its own localised version of Mosaic, Mosaic Global allows for consistent targeting of the same Group or Type across all countries.

Mosaic Global has classified all 28 countries into 10 distinct Groups.

Digital Audience Solutions

Given the continual increase in digital advertising, Mosaic can be applied in new ways, without address data. Experian's Digital Audience Solutions allows you to append Mosaic using a range of digital identifiers. You have the ability to activate Mosaic Groups and Types across a range of digital channels including social media, Programmatic DSPs, DMPs and SSPs, Connected TV and in-app.

Location Analyst

Location Analyst is an easy to use area profiling and catchment analysis tool combining rich consumer data to profile local markets, plan new locations and profile customers online. The Mosaic Groups and Types are fed into Location Analyst enabling sophisticated mapping of the segments with the ability to overlay 2,000+ data variables and to map your own customer data and store locations.

Consumer Spend Series

Designed to attribute a dollar spend figure to Mosaic segments based on their average spending patterns across a wide range of different spending categories, e.g. your customer is likely to spend \$x per week on women's clothing.

This data can then be visualised within Location Analyst in an interactive map or supplied to clients for use within their own GIS (Geographic Information System)

Workplace Demographics

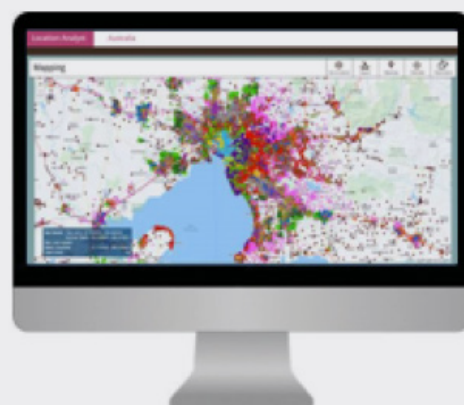

Provides better understanding of customers and potential customers based on where they work. As opposed to Mosaic which is based on where they live.

This data can then be visualised within Location Analyst in an interactive map or supplied to clients for use within their own GIS (Geographic Information System)

inMOBI™

Group/ Type	Group/Type Name	Household (%)	Adult Population (%)
A	First Class Life Wealthiest group in Australia, typically older middle-aged families with significant assets and income	5.25	6.35
	A01 Top of the Ladder Wealthiest families, married couples often with adult children, owning very expensive properties in exclusive inner-urban areas	0.85	1.07
	A02 Luxury Living Baby boomer families, often with adult children, owning expensive properties in inner-urban & coastal areas	1.33	1.57
	A03 Central Prosperity Middle-older aged empty nester couples renting very expensive properties in inner-urban areas, with high income	0.85	0.96
	A04 Suburban Esteem Traditional baby boomer couples with adult children, owning expensive properties in inner-urban & suburban areas of Sydney & Melbourne	2.21	2.75
B	Comfortable Foundations Gen X families with school-aged children, working in white-collar professions and living in suburban areas	6.73	7.18
	B05 Successful Spending Young, married couples with children and high income, living in outer-suburban/metro-fringe areas	1.33	1.43
	B06 Careers & Kids Gen X families with children, living in expensive properties in suburban areas, with high income	2.04	1.97
	B07 Fruitful Families Gen X families with many children, living in metro-fringe areas, with high income	3.36	3.78
C	Striving for Status Young, successful, career-driven professionals living in central city areas with high income and no children	5.19	4.68
	C08 Rooftops & Careers Well-educated, high-powered business people with very high income and no children, living in expensive properties in central Sydney	1.61	1.46
	C09 Elite Alternatives Well-educated professionals, living in trendy inner-urban areas, with high income	1.27	1.26
	C10 Power Couples Young diverse couples, well-educated, transient, city centre renters with high income and no children	2.31	1.96
D	Secure Tranquility Affluent retirees living in higher valued properties in desirable areas	8.07	9.02
	D11 Scenic Connection Older couples in semi-retirement, living in suburban areas and nearby towns for many years, with high income	2.02	2.64
	D12 Journeyed Equity Elderly couples from multicultural backgrounds living in expensive properties in suburban areas of Sydney & Melbourne	2.54	3.08
	D13 Coastal Comfort Retired, traditional couples living in coastal and scenic areas, with average pensionable income levels	3.51	3.31

Group/Type	Group/Type Name	Household (%)	Adult Population (%)
E	Family Fringes Middle-aged traditional families living on large outer-suburban plots, with comfortable incomes and long commutes	5.19	6.53
	E14 Spacious Traditions Middle-aged, traditional families with older children, owning large and expensive properties in outer-suburban areas with high income	1.76	2.39
	E15 Opulent Designs Middle-aged families owning huge houses in outer-suburban areas, with high income	1.46	1.78
	E16 Hardware & Acreage Working in trades, middle-aged families owning acreages of land with large properties just outside the metro fringe	1.97	2.36
F	Establishing Roots Millennial first home buyers, living 10km+ from the city centre with above average income	6.07	5.11
	F17 Determined Suburbans Professional couples and singles with high income, owning their first home in high growth inner suburbs	2.20	1.82
	F18 Developing Domestics Young first-home-owner families with very young children, recently moved into new housing estates, with above average income	1.63	1.59
	F19 Striving Scholars Young, highly educated singles and couples, with above average income, living in high growth suburbs	2.24	1.70
G	Growing Independence Educated millennials at the start of their careers, renting apartments close to city centres	6.76	5.76
	G20 Youthful Ambition Young singles and couples, some students, with no children, renting flats in inner-urban areas, with average income	2.42	2.03
	G21 Emerging Metros Young, well-educated and culturally diverse, renting flats in suburban areas of Sydney, with above average income and no children	1.66	1.56
	G22 Spirit Questers Millennial singles renting in coastal tourist areas, with below average income	1.87	1.46
	G23 Global Studies Young student renters near university campuses, culturally diverse with very low or no income but high spend	0.81	0.71
H	Middle Blue-Collars Younger blue-collar workers renting far from city centres, with below average income	7.32	5.77
	H24 Backyards & Mates Millennial blue-collar couples and singles, living in outer-suburban areas and surrounding towns with average income	1.49	0.92
	H25 Prams & Trades Younger blue-collar families with many children, living in new outer-suburban housing estates, with low to average income	1.94	1.95
	H26 Earnest Internationals Younger, diverse blue-collar commuters renting apartments in Sydney outer-suburban areas, with low income	1.45	1.32
	H27 Township Solos Younger blue-collar singles in regional towns, with low income but have financial stability	2.44	1.58

Group/ Type	Group/Type Name	Household (%)	Adult Population (%)
I	Traditional Pursuits Average income traditional families & single parents with school-aged children living in outer suburban and regional locations	11.16	13.19
	I28 Schools & Bills Millennial families with young children, sometimes single parents, commuting from outer-suburban areas with average incomes	3.23	2.35
	I29 Middle of the Road Older traditional families with older children, commuting from the metro-fringe with average to high incomes	3.62	5.85
	I30 Regional Essentials Couples and single parents with children living in regional areas with low to average incomes	4.31	5.00
J	True Grit Blue-collar households in gainful employment, residing in locations across outer suburban, regional and mining towns	6.82	6.91
	J31 Minerals & Airports Mixture of singles and couples in mining towns, sometimes with children, earning high incomes	0.76	0.71
	J32 Selfless & Hardworking Blue-collar families from multicultural backgrounds, living in outer-suburban areas, with average to high income	2.13	2.42
	J33 Life in the Slow Lane Middle-aged, blue-collar couples living in outer-suburban/metro-fringe areas, with average income	1.87	1.97
	J34 Country Town Courage Low education, monocultural, manual workers with low income, living in low value properties in rural towns	2.06	1.81
K	Mature Freedom Gen X couples without children, renting apartments and terraces in high growth suburbs	7.41	7.60
	K35 Mature Modernites Middle-aged couples without children, renting in inner suburban apartments and terraces	1.57	1.76
	K36 Newfound Freedom Middle-aged, empty nester couples living in outer-suburban/metro-fringe areas, with above average income	3.17	3.15
	K37 Realistic Horizons Gen X couples and sharers living in outer-suburban and regional areas, with low income and small properties	2.66	2.69
L	Hardship & Perseverance Unemployed and blue-collar workers living in units and flats on low incomes	6.80	5.45
	L38 Reset Regionals Blue-collar families, often single parents, living in rural towns with low income and dependent children	2.93	2.38
	L39 New-found Life Multicultural families, sometimes single parents, living in outer-suburban areas with low income	1.19	1.19
	L40 Satellite Battlers Low income singles in regional towns, sometimes living in social housing	1.90	1.22
	L41 Downtown Blues Older single and diverse, city centre renters with very low income, often living in social housing	0.30	0.25
	L42 Township Assistance Younger families, often single parents, with low incomes in regional towns, often living in social housing	0.47	0.41

Group/ Type	Group/Type Name	Household (%)	Adult Population (%)
M	Graceful Ageing Older retirees with below average income, living in owned properties or retirement villages	8.77	8.85
	M43 Blue-Collar Retirees Multicultural older couples living in outer-suburban areas for a long time, with low income but high property value	1.47	1.65
	M44 Staying Put Older, retired couples, sometimes with adult children or carers, who are long term resident in outer-suburban areas	1.64	2.22
	M45 Lonesome Elders Older singles, living in outer-suburban areas and satellite towns, with below average income	2.15	1.17
	M46 Retirement Village Elderly, traditional couples and singles living in retirement villages in cities and regional towns	1.58	1.32
	M47 Rural Retirement Elderly couples, sometimes with adult children or carers, who are long term residents in rural towns, with low pension income	1.93	2.48
N	Rural Commitment Rural people working in agriculture, living on large plots of land far from main roads and main towns	8.46	7.58
	N48 Farming Reliance Rural farmers and farm owners with below average income, living 10-40km away from the nearest town	4.38	4.25
	N49 Outback Comfort Very rural farmers and farm owners with below average income, living 40km+ from the nearest town	1.16	1.05
	N50 Soil & Toil Single farm workers in very small rural towns, with low income and low value properties	1.62	1.25
	N51 Rustic Isolation Low education, traditional, singles in far inland remote towns, with low income and low value properties	1.30	1.03
